Door Holders and Door Stops

KWS door holders hold your door open safely. No matter whether you are ventilating, cleaning, or transporting something, or simply want to keep the door open for your visitors and customers.

For this purpose you can choose from a multitude of types, sizes, throws and materials on offer. On pages 6-9 you will find an overview of all types.

KWS door stops protect your walls and furniture, for example preventing the door hitting the kitchen shelf for the umpteenth time or the door handle leaving its mark on the wall.

There are door stops for many different fields of application and in four materials: aluminium, stainless steel, steel and brass. You can learn more about the door stop types, applications, and the correct mounting from Page 65 onward.

Technical notes

Holders are available in different operation modes, construction types, and materials. The most important holder types can be differentiated by their operation mode, you distinguish between foot and hands-free operation.

Door holders that are operated by foot or hand.

The different fields of application:

In order to narrow down the fields of application we give you an idea of the maximum door weights on the product pages under the headline "Application".

This information is to be considered as a rough guide in order to illustrate the different degrees of sturdiness of door holders. For individual cases the local conditions also play a significant role (floor condition, wind, etc.). On the following page we will demonstrate some special cases.

Special cases:

In some cases there are particular situations that render the use of a normal door holder impossible. For these cases we provide some solutions and are also grateful for any further ideas from our customers.

Case 1

Between door and floor there is a gap of more than 20 mm:

KWS door holders (for foot operation) come with varying throws up to 120 mm, and other door holders can be shimmed so that the gap between floor and bottom door edge is offset.

Case 2

Slippery floors and high wind pressure on open door.

The door holders **1036.. 1037.. 1038.. 1039..** as well as **1040..** up to **1042..** are pushed into a floor-mounted socket and thus hold the door safely open independent of the floor condition or the wind force.

Case 3

Door opens over a step:

The type **1048..** has a throw of up to 250 mm and a very sturdy design. Thus the height of a step can be overcome and the door held open.

Case 4

Frameless glass door:

By means of a glass clamp you can mount the door holders **1113.. 1132..** and **1133..** on an all glass door without boring holes into the door.

Case 5

Barrier-free living:

Here the use of door holders with hands-free operation are most recommendable. These models make it possible to arrest a door, but only at a fixed point where the counterpart is mounted (e. g. magnet in the floor). You are more flexible with the door holder **1048..** which is pushed down by hand because with this one you can arrest the door at any point.

Case 6

Heavy-duty gates:

The type **1043..** is probably the biggest available door holder and is used for arresting very heavy gates. Please note that this type is 445 mm high and weighs 1.9 kg.

Things to be taken into account when mounting door and gate holders:

Door holders should be mounted on the far edge on the door leaf to have the optimum effect. There is a type for casting in (e. g. **1009..** with anchor bolt) which is especially recommendable for outdoors.

Also please note the relevant product-related recommendations for mounting.

1002..

with permanent magnet,
top part for flush mounting

housing of top part in aluminium

bottom part of aluminium with
stainless steel cover plate

for trip-free areas

Standard design

aluminium machined according to E 6

KWS 1 silver, anodised

.41

unit 1 piece

Piece weight

aluminium 0.820 kg

Application

max. door weight approx. 60 kg

holding force 65 N

Operation

The door is opened beyond the magnet part flush-mounted in the floor. The magnet attracts the steel plate mounted in the door and the door is held. When the door is to be closed again, it is pulled from the magnet.

Mounting

The keep plate half is mounted into the bottom of the door, at the furthest point possible from the hinge side. It is fixed with the four screws provided.

The floor part is flush-mounted into the floor at the desired hold open point. Once the grouting component has hardened, the cover plate is replaced. The distance between the stainless steel plate of the top part and the floor part must not be more than 10 mm.

for doors with closing device
flush-mount box of aluminium,
cover plate stainless steel,
guiding peg of plastic

Standard design

stainless steel

brushed	.82
polished	.83

unit	2 pieces
------	----------

Piece weight

stainless steel	0.340 kg
-----------------	----------

Application

max. door weight approx.	80 kg
--------------------------	-------

precondition: door closer

Operation

The door is opened beyond the spring loaded plastic guiding peg. The door is held in place against the peg by the closing action of the overhead closer. Kicking down the guiding peg releases the door again. The provided angle bracket is fixed to the door and serves as edge protection for wood doors and prevents the abrasion of the guiding peg in case of metal doors.

Mounting

Flush-mount the floor box at the arresting point which is to have the greatest possible distance to the door hinge. The cover plate is screwed back on again after grouting the floor hole.

1006..

with spring-loaded end stop for
8 - 13 mm door thickness

flush-mount box of aluminium,
cover plate stainless steel,
guiding peg of plastic

rubber black

**Operation**

The door is moved beyond the spring-loaded plastic guiding peg to the end stop. The peg then springs back and holds the door open. Kicking down the guiding peg releases the door again.

Mounting

Flush-mount the floor box at the arresting point which is at the greatest possible distance from the hinge edge. The cover plate is screwed back on again after grouting the floor hole.

Order example

1013..

with fixing material

1014..

without fixing material

housing and floor block of aluminium or brass,
other metal parts of steel
zinc-plated
catch of plastic,
buffer of rubber, black

For height compensation we recommend the additional use of shim **1555..** (5 mm) or **1556..** (10 mm).

Operation

By simply pushing or pulling the door from the stop the door is held or released. In case of subsequent lifting or sagging doors the door holder can be readjusted simply.

Mounting

The door holder mechanism is mounted on the door with four screws at the greatest possible distance from the door hinge, the holder housing is put on and secured with a screw. The floor block is screwed on the floor at the corresponding position. An additional pin inserted in the floor prevents the floor block from turning. Fitting instructions and boring template are enclosed with each unit package.

1110..

with fixing material
rubber buffer in black, spring-
loaded

Operation

The door is held open when the keep (door mounted) activates the floor mounted catch. The door is released by manually lifting the catch. Operation of the side lever removes the hold open function, in this function the product acts as a spring loaded stop only.

Mounting

Screw the holder mounting plate on the floor with two screws and inserted plugs at the desired arresting point which should be the greatest possible distance from the door hinge. Then put on the holder and fix it with the two screws on the side onto the base plate. The roller block is fixed at the corresponding position on the door.

1009..

with anchor bolt for casting in

1010..

without anchor bolt,
for screwing on

rubber buffer in black, spring-loaded; anchor bolt (for **1009..**) hot-dip galvanised or stainless steel.

Operation

To hold the door it is moved towards the door holder until it is caught by the hook. It is released by actuating the hook while pushing the door against the holder at the same time. The disconnecting lever, moved from position A to B (see drawing) deactivates the arresting mode. Thus the door holder only has the function of a spring-loaded stop.

Mounting

With anchor bolt: Put the provided anchor bolt in the floor and grout it at the desired arresting point which should be the greatest possible distance from the door hinge. After the grouting material has hardened, screw the door holder on and fix the roller block at the corresponding position on the door. Without anchor bolt: Screw the holder with four screws and plugs which are to be inserted into the floor, at the desired position which should be the greatest possible distance from the door hinge and fix the roller block on the door at the corresponding position.

aluminium	1011..	0.730 kg
	1012..	0.690 kg

Application

max. door weight approx.	60 kg
--------------------------	-------

Operation

For holding the door it is moved towards the door holder until it is caught by the hook, it is released by actuating the hook while pushing the door against the holder at the same time. The disconnecting lever, moved from position A to B (see drawing) deactivates the holding mode. Thus the door holder only has the function of a spring-loaded stop.

Mounting

The mounting plate is screwed with two screws in combination with plugs on the wall at the greatest possible distance from the door hinge, the door holder is put on and fastened with two screws. Screw on the roller block at the corresponding position of the door.

Application

max. door weight approx.	100 kg
--------------------------	--------

Operation

For holding the door it is moved towards the door holder until it is caught by the hook, it is released by actuating the hook while pushing the door against the holder at the same time. The disconnecting lever, moved from position A to B (see drawing) deactivates the holding mode. Thus the door holder only has the function of a spring-loaded stop. Holder continuously adjustable to the right and left up to 10°

Mounting

Screw the fixing element with inserted fixture on the wall at the greatest possible distance from the door hinge, put on the holder element, incline it as desired (when opening the door it is to hit the holder at an angle of 90°) and secure it with the threaded bolt. Screw on the roller block at the corresponding position of the door.

1047..

with anchor bolt for casting in

anchor bolt of steel,
hot-dip galvanised

On request also available with
stair bolt **9104.06** instead of
anchor bolt.

Operation

For holding the door it is moved
towards the holder unit the hook
catches. For releasing the door it
is sufficient to push the button
gently while pushing the door
against the holder at the same
time.

Mounting

The anchor bolt is inserted in the
floor at the desired holding point
which should be the greatest
possible distance from the door
hinge. The holder is screwed on
the projecting thread of the
anchor bolt and secured against
turning by means of a screw. At
the corresponding position the
roller block is fixed on the door.

with hook
Option to deactivate the holding mode

of aluminium or brass
buffer of rubber, white

Operation

For holding the door it is pushed against the holder until the hook catches the eye. By lifting the hook the door is released again. The Operation of the hook can be deactivated. In that case the holder only serves as a door stop.

Mounting

The eye is screwed on the wall at the greatest possible distance from the door hinge. At the corresponding position the fixing element of the holder is fastened on the wall, the holder put on and secured with a clamp screw.

1058..

with fixing material

1059..

without fixing material

holder of aluminium or brass with buffer of rubber, black (on request available with white rubber)

Operation

Hold open is effected by manually clicking the holding device into a cut-out of the holder bottom part. The holding device is fastened to the door, the bottom part is screwed on the floor. Without operating the door part the floor part only serves as a door stop.

Mounting

The holder floor part is screwed on the floor at the desired arresting point which should be the greatest possible distance from the door hinge. An additional pin inserted in the floor prevents the floor part from turning. The holder door part is screwed on 30 mm from the floor in the area of the floor part to centre screw holes of the door part and a lateral distance of 3 mm from centre screw hole floor part to centre screw hole of the door part.

For height compensation we recommend the additional use of the shims **1557..** (5 mm), **1558..** (10 mm) or **1559..** (15 mm).

1060..

for doors with closing device

buffer of rubber, black

Operation

The door can be held open at any opening angle. The lowered drop arm prevents the closing of the door by the closing device. Release is effected by simply raising the drop arm which is then held by a flat spring.

Mounting

The fixing of the door holder is effected by two screws at the greatest possible distance from the door hinge on the door side facing the closing direction. The distance between floor and the centre of the bottom screw hole has to be 80 mm.

A regular light greasing of the flat spring prevents abrasion on the drop arm.

Standard design**aluminium****bolt stainless steel**coloured plastic-coated **.70****aluminium machined according to E 5****bolt stainless steel**KWS 1 silver anodised **.31**KWS 2 nickel silver anodised **.32**KWS 3 gold anodised **.33**KWS 5 dark bronze anodised **.37**

unit 1 piece

Piece weight

aluminium 0.800 kg

Application

max. door weight approx. 40 kg

Operation

The door can be held open at any opening angle. For this the bolt is pushed down until the foot sticks on the floor. For releasing the door a gentle push on the check plate suffices.

Usable for right and left.

Mounting

Put clamp on the door and screw it tight, screw the mounting plate of the holder on the clamp, put on door holder and secure it with a screw. The distance from bottom edge of door to foot is to be 5 - 10 mm. For fixing the door holder there are no bore holes necessary in the glass. Mounting instructions are enclosed with each unit package.

The default hub spring increases the contact pressure on the floor.

**1017..**

with adjustable brake action,
especially suitable for
e. g. garage doors

Operation

By overcoming the brake power the door can be opened up to 125° and can be locked in position at any point within this range. The brake power is altered by turning the knurled adjuster.

Mounting

The stop bracket (1) should be fixed to the door at a distance of 120 mm measured between the middle of the hinge plate and the centre of the hex nut. Mounting plate (2) should be screwed underneath the door frame at 525 mm measured from centre of hinge plate to centre of pivot. There should be a distance of 2 - 3 mm between the closed door and mounting plate. Detailed instructions are included with every unit. This door brake should not be used as a limit stop.

Technical note

Door stops are required for all types of doors and the KWS range is accordingly wide. While for the interior relatively flat and compact door stops are desired, for exterior doors door stops are used that cushion the impact of a heavy door by a spring mechanism.

In public buildings, in particular, sturdy door stops should be chosen for heavy-duty doors. Door stops are also differentiated between whether they are mounted on the floor or on the wall.

To give you a better idea, here are few examples:

Light to medium interior doors:

2001..

floor mounting

2003..

floor mounting

2095..

floor mounting

2110..

floor mounting (spring-loaded)

2007..

wall mounting

2076..

wall mounting

Medium to heavy interior and exterior doors:**2024..**

floor mounting (spring-loaded)

**2051..**

wall mounting (spring-loaded)

Heavy doors and gates:**2019..**

floor mounting (spring-loaded)

**2120..**

wall mounting (spring-loaded)

Things to be taken into account when mounting door stops:

The forces between door and stop are not be underestimated, the stop should not hit the door handles or pulls. Door stops should hit the door leaf – at a right angle – as far from the hinge edge as possible. In our range there are heavy wall stops with adjustable angle (e. g. **2051..**).

A floor stop should not become a tripping hazard and is thus to be mounted as close to the wall as possible. Flat stops like the well-known **2001..** or the **2003..** are basically tripping hazard free.

In any case it is crucial to mount neatly and to use pins that prevent the turning of the stop. KWS stops either have this pin or a multipoint fixing method. For outdoors a type for casting in (e. g. **2023..** or **2019..**) is recommendable.

Also please observe the product-related recommendations.

2001..

with fixing material

2002..

without fixing material

with black rubber stop

on request also available with white rubber stop

Accessories

For height compensation we recommend the additional use of shims **1557..** (5 mm), **1558..** (10 mm) or **1559..** (15 mm).

Mounting

The door stop is screwed on the floor at the greatest possible distance from the door hinge. The locating pin prevents the door stop from turning.

**Order example**

Piece	Part no.	Finish no.
... Piece	2033	.03

2023..

with anchor bolt for casting in

2024..

without anchor bolt for screwing on

of aluminium, brass or stainless steel with spring-loaded buffer of rubber, black

anchor bolt hot-dip galvanised stainless steel

Accessories

For height compensation we recommend the additional use of the shim **1610..** (20 mm).

Mounting

With anchor bolt: Put the provided anchor bolt in the floor and grout it at the desired point which should be the greatest possible distance from the door hinge. After the grouting material has hardened, screw on the door stop.

Without anchor bolt: Screw the door stop on the floor with four screws and inserted plugs at the desired point which should be the greatest possible distance from the door hinge.

1610..

shim 20 mm high

2020..

with four threaded blind holes for screwing on from the back

of steel with spring-loaded buffer of rubber, black

Mounting

The door stop is fastened with four screws M10 through threaded blind holes on the back or welded on. During mounting please consider that the buffer shaft protrudes approx. 10 mm at the back (spring system of the buffer).

**Standard design****steel/aluminium**

2120..

with four screw holes for screwing on from the front side of the stop

of steel/lightmetal or stainless steel, with spring-loaded buffer of rubber, black

Mounting

The fixing element is screwed on, the buffer housing put on and secured with two screws. In case of this door stop, in contrast to **2020..** the buffer shaft does not protrude at the back, as the buffer travel of 10 mm is within the housing (facilitation of mounting).

General Information

KWS products last long, but not forever. This is why we show you on the following pages which spare parts you can reorder and replace.

In addition, we offer you fixing materials as accessories as far as they are not included in the scope of supply by default.

Short symbols for the finishes of aluminium

material aluminium anodisable surface treatment subsequently anodised and compacted	Short symbol	1 Effect on surface damage (die marks - slight damage) 2 Structure and appearance
ground - brush-finished	E 4	1 up to completely removed 2 evenly dull-bright
ground - polished	E 5	1 to completely removed 2 smooth and highly brilliant to reflecting
chemically pickled	E 6	1 partly to mostly set off 2 variation option from dull to matt gleaming

Finish codes

raw steel, untreated surface	.01
silver stove enamelled	.02
black stove enamelled	.03
gold stove enamelled	.04
electro-galvanised	.06
hot galvanised	.07
dark brown stove enamelled	.10
special stove enamelled finish	.19

Aluminium E 4

natural finish, surface untreated	.20
ground and brushed	.21
KWS 1 silver anodised	.22
KWS 2 nickel silver anodised	.23
KWS 3 gold anodised	.24
special anodised colour	.26
KWS 4 light bronze anodised	.27
KWS 5 dark bronze anodised	.28
KWS 6 black anodised	.29

Aluminium E 5

natural finish, ground and polished	.30
KWS 1 silver anodised	.31
KWS 2 nickel silver anodised	.32
KWS 3 gold anodised	.33
brushed stainless steel effect anodised	.35
KWS 4 light bronze anodised	.36
KWS 5 dark bronze anodised	.37
KWS 6 black anodised	.38
special anodised colour	.39

Aluminium E 6

natural finish, chemical dipped	.40
KWS 1 silver anodised	.41
KWS 2 nickel silver anodised	.42
KWS 3 gold anodised	.43
KWS 4 light bronze anodised	.46
KWS 5 dark bronze anodised	.47
KWS 6 black anodised	.48
special anodised colour	.49

Brass

natural finish	.60
brushed and waxed	.61
brushed and lacquered	.62
nickel plated	.63
polished and waxed	.65
polished and lacquered	.66

Plastic coated colours

	.70
golden yellow	RAL 1004
flame red	RAL 3000
ruby red (.76)	RAL 3003
wine red	RAL 3005
sapphire blue (.75)	RAL 5003
brilliant blue	RAL 5007
azure blue	RAL 5009
leaf green	RAL 6002
moss green	RAL 6005
olive drab	RAL 6022
stone grey	RAL 7030
sepia brown	RAL 8014
mahogany brown	RAL 8016
dark brown (.74)	RAL 8077
grey white	RAL 9002
pure white (.71)	RAL 9010
graphite black (.73)	RAL 9011
traffic white (.72)	RAL 9016
other RAL colours on request	

Stainless steel

natural finish	.80
brushed	.82
polished	.83

Plastic / rubber / wood

PVC	.95
rubber	.96
beech wood	.98
